## EP4 residential

### Ultra-Efficiency Pool Pumps with Electron Storage Technology

#### ECT™ Electron Condensor Technology

Cutting-edge condensors store electrons in a dielectric until the power is called upon. Then when the motor rotates into the optimal position, the stored energy is released, boosting the energy transferred to the impeller. The result is a significant energy reduction, up to 85% over traditional pool pumps. Now you can run your pump over twice as long, for less than half the cost!

#### Cool & Quiet Under Pressure

EcoPump features dual bearings for cooler operating temperatures and achieves almost silent operation on the most efficient setting.

#### Three Year Limited Warranty

EcoPump features a best in class warranty of three years. Unlike some other pumps, EcoPump has no onboard electronics that are prone to failure. If you want years of trouble free performance, this is your pump.

Oversized trap basket with posi-lock seal

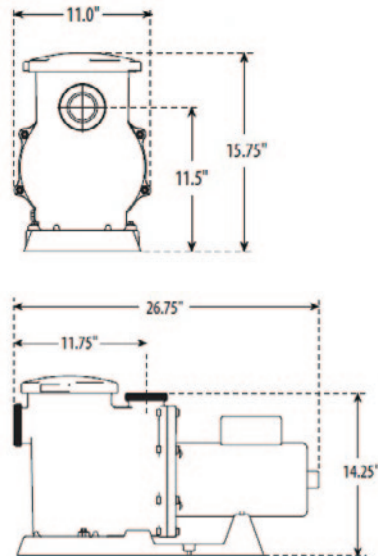

2.5" FPT Inlet/Outlet with 2" Unions

Durable uni-body housing

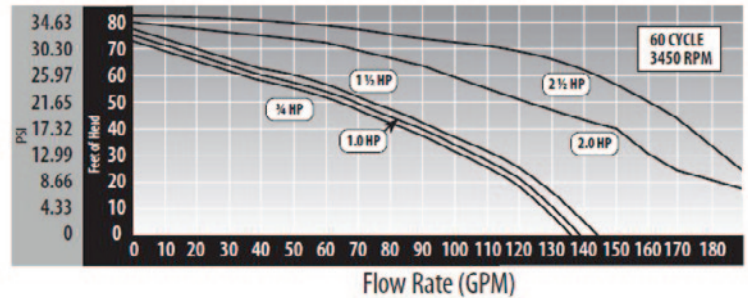

Self-priming

Easy to Service

Pressure v. Flow Rate @ Max Speed
